

Expected outcome:

Produce deep learning models which translate text on inscriptions in Sri Lanka which were written using Sinhala to English language and predict partially erased or damaged text on inscriptions. (In future need to produce mobile app based on the model)

Further clarification:

1. I have images of inscriptions which were written in Sinhala (some text are partially erased.) Examples as follows.

2. Need to translate those Sinhala inscription images into English language using YOLOv8 and vision Transformers
